

ACADEMIC PROFILE			
Degree	Institute	%/CGPA	Year
MBA	Indian Institute of Management, Mumbai	Pursuing	2027
B.Sc (Computer Science)	SVR Degree College, Sattenapalli	76.46%	2025
Class XII	FIITJEE Junior College, Vijayawada	84.30%	2021
Class X	Jawahar Navodaya Vidyalaya, Maddirala	80.02%	2019
INTERNSHIP			
Company Name: Freudenberg Gala Household Product Pvt Ltd			May'26-Jun'26
Project Title: Logistics Planning & Optimization using AI			
Project Details	- Architected a WMS-native optimization platform for 550+ customers and 182 SKUs using AI-driven planning Automated DO processing, stock validation & invoice clubbing, eliminating Excel-based dispatch planning workflow - Engineered a MILP-based vehicle optimization model incorporating 22+ constraints for fleet dispatch load planning - Engineered MILP-based vehicle optimization model incorporating 22 operational constraints for dispatch planning - Built a dynamic constraint-management framework, centralizing business rules and reducing planner dependency Integrated FTL-PTL decision intelligence with dynamic freight benchmarking for shipment mode optimization - Developed real-time planning dashboards monitoring 1,600+ monthly invoices, utilization and dispatch readiness levels		
Achievements	- Compressed Dispatch Planning Cycle by 97%+, replacing manual allocation with optimization-driven workflows - Achieved 95-98% planning accuracy across 2,000+ invoices through constraint validation & business rule enforcement - Maximized Vehicle Utilization from 76% to 80%+ through constraint-driven load consolidation & fleet optimization Developed AI-powered agents automating logistics analysis, optimization recommendations & exception monitoring - Identified 5.17% Freight-to-Net Sales reduction opportunity through analysis of 5 months of freight dispatch data Enabled 100% Constraint Compliance through centralized customer, fleet and routing rule enforcement mechanism - Identified ₹1.46 Cr annual savings opportunity, with projected 21,900% first-year ROI and <5-day payback period		
Dream India Technologies			Date
Project Title: Student Performance Analytics and Management System			
Project Details	Collaborated with faculty teams to gather requirements and align with academic workflows for smoother adoption - Built a scalable student management system using OOP, automating academic records for 200+ students efficiently - Designed a user-focused interface for faculty to improve adoption & engagement across the academic departments - Engineered Python analytics tool with GUI & Seaborn, enabling real-time academic performance visuals and insights - Streamlined data parsing & serialization, reduced latency, enhanced efficiency and optimized analytics workflows		
Achievements	- Computerized student attendance tracking, saving 10+ hours per month and reducing faculty workload significantly - Improved reporting efficiency by reducing generation time by 50%, enabling quicker delivery of detailed performance - Built a resilient file I/O pipeline, increasing data throughput by 40% across 5+ modules through efficient data handling		
PROJECTS			
Vikram Solar			Duration
Project Title: Strategic Sourcing & Procurement Analytics Procurement Analytics & Strategic Sourcing			
Project Details	Analyzed ₹6,372 Cr procurement spend across 6,300+ POs & 408 SKUs spanning 5 years, 161 recurring suppliers Rebuilt procurement taxonomy, consolidating 41 raw materials into 14 standard categories for category-level analysis - Architected quantitative Kraljic framework scoring 14 material categories with 9 weighted sourcing parameters Quantified supply risk using 6 weighted drivers including Incoterm risk transfer, credit terms & market concentration - Designed 5-parameter Supplier Importance Score ranking suppliers for 7 critical raw materials into 7 sourcing tiers Benchmarked supplier markup against best available price per SKU, turning price dispersion to negotiation leverage - Engineered price forecasting framework benchmarking 5 machine learning & 3 time-series models for 7 materials		
Achievements	Isolated 7 material categories driving 92% of ₹6,372 Cr spend, focusing sourcing bandwidth on the key cost drivers - Surfaced working capital opportunity, 96 of 161 suppliers had multiple payment terms & 13 on 5+ payment terms Flagged uncontrolled risk transfer, with 74 of 161 suppliers on multiple Incoterms & 19 suppliers on 3+ Incoterms Identified forward-buying opportunity across 48 of 408 SKUs with 50%+ price swings in 2024–25 buying cycle Improved tempered glass forecast accuracy 3x, cutting price forecast error from 12.35% to 3.92% by specification split Established import sourcing case, with only 7 of 43 dual-currency items cheaper in INR, protecting landed cost Classified the supplier base from vested strategic to avoid, converting supplier scores into executable sourcing calls		
Comptroller and Auditor General of India			Duration
Project Title: Logistics Analytics and Distribution Network Optimization for Kerala PDS			
Project Details	Audited 696,983 GPS telemetry packets under AIS-140 protocol, structuring clean trajectory data for the fleet network Reconciled 8,046 planned trips against live GPS data across first and last mile legs, revealing only 30% reached execution Optimized capacitated multi drop routing for 931 retail outlets at 20T capacity to minimize total last mile delivery cost Mapped end to end food grain movement across mills, godowns and FPS to assess distribution network effectiveness - Identified 1,242 Fair Price Shops lacking verified last-mile deliveries through GPS proximity analysis across four districts - Uncovered storage constraints of 3,200 MT highlighting warehouse capacity bottlenecks limiting network responsiveness Identified stockout exposure across 15 of 23 depots through inventory risk assessment and demand-cover analysis		
Achievements	Optimized facility allocation across 931 FPS, reducing transportation distance by 3,412 km via network optimization Eliminated redundant handling stages by routing direct mill to shop dispatch, cutting loading, unloading and lead time - Consolidated optimal supply to 16 of 51 godowns, proving surplus in warehouse capacity for network rationalization Diagnosed supply chain traceability gaps across 70% of transportation movements, strengthening monitoring controls - Formulated district-level sourcing strategy delivering 3.1% lower logistics distance while preserving zone boundaries		

Project Title: Price Forecasting & Forward-Buying Strategy		Duration
Project Details	- Analyzed ₹6,372 Cr procurement spend across 6,300+ POs & 408 SKUs spanning 5 years, 161 recurring suppliers - Engineered 20+ price drivers from 6,307 procurement records across 240 suppliers, 10 Incoterms & 5 years of spend - Architected price forecasting engine benchmarking 7 ML algorithms via 5-fold cross-validation, auto-selecting best fit - Automated SARIMA selection across 100+ configurations, generating 12-month price forecasts with confidence bands - Built forward-buying trigger linking 12-month price forecasts to advance-purchase timing by material - Screened all 408 SKUs for price volatility, flagging 48 with 50%+ swings as forward-buy & buffer candidates - Isolated 7 materials driving 92.5% of ₹6,372 Cr spend, directing forecasting effort to the highest price risk - Cross-validated best-fit model to 7.75% error on solar cell prices, auto-selected over 6 competing algorithms - Designed a forward-buying decision framework converting forecasts to advance-purchase signals ahead of price spikes - Delivered 12-month forward price visibility across 7 high-spend materials, equipping buyers to time buys & set budgets	
Achievements	- Analyzed all 408 SKUs for price volatility, isolating 48 high-risk items with 50%+ swings as forward-buy & buffer targets - Shifted procurement from reactive to predictive buying, timing buys ahead of forecast price rises to hedge input cost - Surfaced working capital opportunity, 96 of 161 suppliers had multiple payment terms & 13 on 5+ payment terms - Improved tempered glass forecast accuracy 3x, compressing error from 12.35% to 3.92% via specification-level split - Identified ₹307 Cr net forward-buying opportunity at ~10:1 gain-loss by timing buys a month ahead of price rises	

Schreiber Foods Project Title: Cold-Chain Distribution Network Design & Optimization		Duration
Project Details	- Simulated demand, production, spoilage & dispatch in a day-by-day cold-chain digital twin of 900 nodes & 3 plants - Traced the post-4-DC profit reversal to inventory fragmentation inflating spoilage, markdown price and holding cost - Scored 7 weighted criteria spanning service, profit, cost, carbon and spoilage into a composite suitability index - Evaluated 10 DC-network configurations on cost-to-serve, service, spoilage & profit across a 1-to-10 density sweep - Located the 4-DC network optimum, resolving the centralization-vs-decentralization trade-off across a 3-6 DC zone - Weighted service, cost, profit, carbon, spoilage & transit waste in a 7-criteria MCDA composite suitability index - Stress-tested 10 networks under peak-season demand-shock disruption, elevating cold-chain transit-waste cost	
Achievements	- Established 4-DC as the composite optimum at 80.4 baseline & 66.9 disruption on the weighted suitability index - Exposed 15% profit erosion & 2x spoilage inflation over the 4-to-10-DC over-build the network-fragmentation penalty - Recommended a 4-DC footprint pairing demand-proportional inventory & peak-season pre-positioning vs uniform stock	

SVR Degree College Project Title: ML-Based Automated Defect Detection System for Manufacturing Quality Control		7 Weeks
Project Details	- Improved defect traceability by 45% through agile model tuning & enhanced closed-loop feedback mechanism design - Implemented agile model tuning with closed loop feedback cycle to improve traceability & detection accuracy metrics - Built and tuned CNN model to automate defect detection using 15K+ well annotated manufacturing image datasets - Engineered real-time defect classification using machine learning to enhance QA system response and output precision - Enabled quicker root cause analysis of defects by providing granular, real-time data insights, for efficiency and speed	
Achievements	- Boosted OEE by 25% by cutting inspection delays 40% and streamlining QA workflows across all production stages - Enhanced production quality by deploying real-time ML inspection, cutting the defect escape rate by 30% accurately - Optimized defect annotation via semi-automated tools, reducing data prep time by 35% and speeding up model training	

We Are with You Charitable Trust Project Title: Community Outreach and Engagement Strategy		9 weeks
Project Details	- Amplified stakeholder engagement via hyperlocal campaigns across segmented & underserved community ecosystems - Designed collaborative outreach networks for schools & rural hubs, enabling long-term visibility, access, & inclusion - Engaged in real-time social impact projects focused on community welfare, data collection, & detailed reporting tasks - Used digital platform tools to streamline outreach efforts, improve team coordination, and to track engagement impact	
Achievements	- Scaled community engagement by 40% via high-impact local field activation events & immersive outreach campaigns - Forged impactful alliances with 15+ partners to improve outreach efficiency & stakeholder conversion effectiveness - Drove 60% spike in volunteer turnout by deploying behaviour-led and data-informed outreach in schools & colleges	

POSITION OF RESPONSIBILITIES		
Student Affairs, IIM Mumbai	- Digitalized end-to-end hostel & mess operations for 1,100+ students through centralized digital workflows - Redesigned new student onboarding to compress the manual registration TAT from 3-4 hrs to 20-30 mins	
CR, Comp Dept	- Elected class representative from 150+ peers; enabled strong faculty-student ties and resolved issues effectively - Assisted 160 juniors during the orientation by organizing academic support sessions to facilitate their transition	
Event Head, Social Impact	- Drove eco-health drives in 10+ villages, impacting 3K+ lives via kit distribution, planting & awareness drives - Increased the Footfall by 27% through promoting a Blood Donation camp held by regional police authorities	
Student Council, SVR	- Achieved 20% surplus on ₹75K Samiksha fest budget through precise tracking & strategic vendor collaboration - Executed Freshers' Program for 300+ attendees, optimizing costs and coordinating 20+ vendor partnerships - Organized section wars events, managed equipment & scheduling, contributing to 100% event completion rate	

AWARDS AND ACHIEVEMENTS		
IIM Mumbai SRIC	- Developed AnyLogistix simulation models for network optimization and scenario analysis in supply chains - Developed AnyLogistix simulation for automotive network optimization & scenario analysis for Tata Motors - Enabled 30+ Tata Motors executives to evaluate network trade-offs through hands-on supply chain simulation - Developed GenAI powered prototype for CMA CGM, validating maritime logistics decision-support use cases	
Extra Curriculars	- Led distribution of 2K+ safety kits across 10+ villages, driving health and last-mile delivery as Outreach Lead - Secured 1st Runner-up among 16 teams and 180+ players in a regional-level inter-college kabaddi tournament - Led anti-ragging campaign with local Police, sensitizing 1K+ students and boosting campus safety awareness - Conceptualized and led an anti smoking drive in schools, engaging 400+ students through interactive content - Led World Environment Day, organizing plantation drives, and eco-pledges engaging 700+ students & locals - Spearheaded a Green India Mission campaign, planting 300+ saplings & hosting eco-literacy sessions for 500+ - Contributed to eco-awareness drives on waste management engaging 800+ students using sustainable practices - Debated Yoga vs Other Sports on Sports Day, advocated yoga's core benefits, praised for clarity and balance	

	▪ Debated on Online vs Offline Classes Pros & Cons appreciated for balanced views & relevant real life example	
Academics	▪ Awarded top grade out of 120+ for building interactive Python apps with Tkinter, such as digital notepad ▪ Ranked in top 15% of 150+ students with O & A+ grades in 18 core courses, showcasing strong academic rigor	
Certifications	▪ Completed Unilever's Supply Chain Management and Analytics a online course offered through Coursera ▪ Completed Data Analysts Toolbox: Excel, Python, Power BI, PivotTables, a data analysis course from Udemy ▪ Completed IMD's Sustainability for Business: ESG Fundamentals a online course offered through Coursera
